

## WHAT IS CLAIMED IS:

- 1 1. A voice-data control system for use with a  
2 communication facility including remote terminals for  
3 individual callers, wherein said remote terminals may  
4 comprise a conventional telephone instrument including  
5 voice communication means for providing audio response  
6 signals and digital input means for providing digital  
7 response signals, said control system comprising:
  - 8 cue means for cueing select ones of said  
9 terminals to prompt selective actuation of said voice  
10 communication means and said digital input means to  
11 provide responsive signals;  
12 status means to selectively identify response  
13 signals from each select terminal as digital control  
14 signals, digital data signals or audio signals;  
15 memory means for storing individual caller  
16 data;  
17 means for addressing individual caller data  
18 from said memory means in response to digital signals  
19 from said digital input means;  
20 means for storing digital data signals from  
21 said digital input means as additional individual caller  
22 data;  
23 control means for actuating said cue means and  
24 said status means to cue and identify audio signals,  
25 operation of said control means being conditioned on the  
26 failure of said means for addressing individual caller  
27 data to provide signals representative of caller data  
28 from said memory means; and  
29 means for storing said audio signals represen-  
30 tative of caller data in said memory means responsive to  
31 cueing by said cue means.

1           2. A system according to claim 1 further  
2 including interface processor means for receiving said  
3 audio signals representative of caller data and said  
4 digital signals for processing.

1           3. A system according to claim 2 wherein said  
2 interface processor includes means to isolate a subset  
3 of said callers.

1           4. A system according to claim 1 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use.

1           5. A system according to claim 1 wherein said  
2 communication facility provides automatic number  
3 identification (ANI) signals and said status means  
4 selectively identifies said automatic number identifica-  
5 tion signals as digital control signals or digital data  
6 signals.

1           6. A system according to claim 5 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use and wherein said callers are  
4 identified by said automatic number identification (ANI)  
5 signals.

1           7. A voice-data control system for use with a  
2 communication facility including remote terminals for  
3 individual callers, wherein said remote terminals may  
4 comprise a conventional telephone instrument including  
5 voice communication means for providing audio response  
6 signals and digital input means for providing digital  
7 response signals, said control system comprising:  
8           cue means for cueing select ones of said  
9 terminals to prompt selective actuation of said voice

TOEFOE

1                   8. A system according to claim 7 further  
2                   including consumable key test means to qualify callers  
3                   with respect to limited use.

1                   9. A system according to claim 7 wherein said  
2                   means for processing includes interface processor means  
3                   for receiving said audio signals representative of  
4                   caller data and said digital signals for processing.

1                   10. A system according to claim 7 further  
2                   including a plurality of audio response units for  
3                   interfacing said means for processing to said communica-  
4                   tion facility.

1           11. A system according to claim 7 wherein  
2       said communication facility provides automatic number  
3       identification (ANI) signals and said status means  
4       selectively identifies said automatic number identifica-  
5       tion signals as digital control signals or digital data  
6       signals.

1           12. A voice-data control system for use with  
2       a communication facility including remote terminals for  
3       individual callers, wherein said remote terminals may  
4       comprise a conventional telephone instrument including  
5       voice communication means for providing audio response  
6       signals and digital input means for providing digital  
7       response signals, said control system comprising:  
8           cue means for cueing select ones of said  
9       terminals to prompt selective actuation of said voice  
10      communication means and said digital input means to  
11      provide responsive signals;  
12           status means to selectively identify respon-  
13      sive signals from each select terminal as digital  
14      control signals, digital data signals or audio signals;  
15           control means implementing a stored program to  
16      control said cue means and said status means in accor-  
17      dance with said program and said digital control signals  
18      to prompt responsive signals from each select terminal  
19      in accordance with said status means, said program  
20      implementing an interface communication operation; and  
21           means for selectively storing responsive  
22      signals from said select terminals including digital  
23      data signals and audio signals as selectively identified  
24      by said status means to indicate identification data and  
25      process data provided by said callers.

FOCT 90 66E T 8860

1           13. A system according to claim 12 wherein  
2      said means for storing signals stores signals represen-  
3      tative of billing information.

1           14. A system according to claim 13 wherein  
2      said control means further implements inventory means to  
3      account for items.

1           15. A system according to claim 14 wherein  
2      said inventory means includes an inventory record of  
3      said items.

1           16. A system according to claim 12 wherein  
2      said communication facility provides automatic number  
3      identification (ANI) signals and said status means  
4      selectively identifies said automatic number identifica-  
5      tion signals as digital control signals or digital data  
6      signals.

1           17. A voice-data control system for use with  
2      a communication facility including remote terminals for  
3      individual callers, wherein said remote terminals may  
4      comprise a conventional telephone instrument including  
5      voice communication means for providing audio signals  
6      and digital input means for providing digital response  
7      signals, said control system comprising:

8           cue means for cueing select ones of said  
9      terminals to prompt selective operation of said voice  
10     communication means and said digital input means at said  
11     terminals to provide responsive signals;

12           status means to selectively indicate respon-  
13     sive signals from each select terminal as digital  
14     control signals, digital data signals or audio signals;

15           control means for receiving said digital  
16     control signals for actuating said cue means and said

17 status means to cue and identify responsive signals in  
18 relation to the operation selectively prompted by said  
19 cue means; and

20 means for storing and retrieving individual  
21 caller data, including said audio signals for reproduc-  
22 ing audio caller voice data at a remote terminal.

1 18. A system according to claim 17 further  
2 including a plurality of audio response units for  
3 interfacing said means for processing to said communica-  
4 tion facility.

1 19. A system according to claim 17 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use.

1 20. A system according to claim 17 wherein  
2 said communication facility provides automatic number  
3 identification (ANI) signals and said status means  
4 selectively identifies said automatic number identifica-  
5 tion signals as digital control signals or digital data  
6 signals.

1 21. A voice-data control system for use with  
2 a communication facility including remote terminals for  
3 individual callers, wherein said remote terminals may  
4 comprise a conventional telephone instrument including  
5 voice communication means for providing audio signals  
6 and digital input means for providing digital response  
7 signals, said control system comprising:

8 cue means for cueing select ones of said  
9 terminals to prompt selective operation of said voice  
10 communication means and said digital input means at said  
11 terminals to provide responsive signals;
